The global PE Solid Wall Pipe market size is predicted to grow from US$ 9750 million in 2025 to US$ 13610 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

PE solid wall pipes are made of materials such as high-density polyethylene (HDPE) or linear low-density polyethylene (LLDPE), which can withstand high pressure and are suitable for various engineering scenarios. PE material has excellent chemical corrosion resistance and can operate stably in various acidic and alkaline media, extending the service life of pipelines. Compared to metal pipes, PE solid wall pipes are lighter in weight, making them easier to transport, install, and maintain. PE solid wall pipes can be connected using methods such as hot melt, electric welding, and spiral joints, which have the characteristics of simple connection and reliable sealing. PE solid wall pipes have good wear resistance and impact resistance, and are suitable for various complex engineering environments.In 2024, global PE Solid Wall Pipe production reached approximately 5836 K MT, with an average global market price of around US$ 1627 per MT.The production capacity of a single small-diameter production line is around 1800 tons; The production capacity of a single medium caliber production line is around 3000 tons; The production capacity of a single large-diameter production line is about 5000 tons. The gross profit margin is around 20%.

Upstream: PE solid wall pipes are made of PE80 and PE100 as raw materials.

Downstream: Municipal engineering: the largest application area. Including urban and rural water supply networks, drainage/sewage networks, reclaimed water recycling systems, etc. Gas transmission: the field with the highest requirements for pipe quality and the highest certification barriers. Agricultural irrigation: water-saving irrigation pipes.

Raw material cost: 70% -85%;
