The report requires updating with new data and is sent in 48 hours after order is placed.

The global Pea Derivatives market size is projected to grow from US\$ 2802.7 million in 2022 to US\$ 6168.7 million in 2029; it is expected to grow at a CAGR of 11.9% from 2023 to 2029.

One of the most significant drivers of the market is consumer interest in plant-based alternatives to animal products. As more consumers seek meat- and dairy-free options, the pea protein and other derivatives market are likely to exhibit continuous growth. The market experiences growth due to the rising demand for peas, particularly in developing regions. Commercially grown varieties include yellow peas and green peas, with yellow peas spearheading global production.

The leguminous family's highly cultivated pea is a nutrient-dense pulse crop. The solubility, ability to hold both water and oil, ability to form emulsions, ability to gel, and viscosity of pea derivatives are all great functional qualities. They contain high-quality proteins, starch, carbs, dietary fibers, and micronutrients like vitamins and minerals. Moreover, it is enhanced with non-nutritional phytochemicals, antioxidants, flavonoids, tannins, and other phenolic compounds. By fostering intestinal bacteria, dietary fiber taken from a cell wall's cotyledon, seed coats, and pods has been shown to hasten gastrointestinal activity. By lowering the glycemic index and decreasing the digestion of pea starch, intermediate amylose helps to keep blood sugar levels stable.
