The global Pea Protein Isolate market size is predicted to grow from US\$ 813 million in 2025 to US\$ 1413 million in 2032; it is expected to grow at a CAGR of 8.4% from 2026 to 2032.

Pea protein isolate is a food additive with a neutral taste; it extracted from pea, and has a typical legume amino acid profile. In 2025, global Pea Protein Isolate production reached approximately 161 K MT.

Major driver of the pea protein isolate market is accelerating consumer demand for plant-based nutrition across mainstream and specialized diets. Flexitarian eating, dairy-free preferences, and the rise of vegan/vegetarian lifestyles are pushing brands to add high-protein options in everyday foods and beverages. Pea protein isolate benefits from being naturally free of dairy and often positioned as allergen-friendly compared with soy, which broadens its appeal for consumers seeking clean-label, ?better-for-you? protein sources.

Another key driver is expanding use in food and beverage formulation as manufacturers improve taste, texture, and functionality. Pea protein isolate is widely used in plant-based meat analogs, ready-to-drink shakes, protein powders, bakery, snacks, and nutrition bars because it can contribute to emulsification, water binding, and structure. Ongoing processing improvements?such as better fractionation, fermentation, and flavor-masking?reduce grassy notes and improve solubility, making it easier to incorporate into a wider range of products without compromising sensory quality.

Finally, sustainability and supply-chain considerations support market growth. Peas generally require less water and can fix nitrogen, which helps positioning in lower-impact agriculture narratives and appeals to brands with ESG commitments. At the same time, companies value diversifying away from more volatile or controversial

protein sources by using regionally available pea supply where possible. As major food manufacturers scale plant-based portfolios and athletes/active consumers adopt plant proteins for performance nutrition, pea protein isolate demand continues to rise across both retail and foodservice channels.
