The global Peak Shaving Construction Generator Sets market size is predicted to grow from US$ 1298 million in 2025 to US$ 2384 million in 2032; it is expected to grow at a CAGR of 9.3% from 2026 to 2032.

In 2024,global peak shaving construction generator sets production reached approximately 24,362 units, with an average global market price of around US$ 50,000 per unit. A factory gross profit of USD 7,500 per unit with 15% gross margin. Manufacturers typically operate production lines with a full machine production capacity of 1,000 units per year per line. COGS structure is composed of engine & altemator, electrical systems, farme/canopy & acoustic enclosure, coding & exhaust systems, fuel system & filter, labor, logistic & packaging and other direct unputs. Downstream demand is concentrated in construction and temporary power followed by industrial and mining. Peak shaving generator sets are on-site power systems used by businesses to reduce electricity costs and ensure reliability by supplementing the grid during periods of high energy demand. When the facility's power consumption reaches a predefined threshold, the generator starts to provide power, thereby "shaving" the peak and preventing the need to draw expensive peak power from the utility grid. This strategy minimizes demand charges, improves power quality, and can also function as backup power during utility outages.

United States market for Peak Shaving Construction Generator Sets is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
