The peanut color sorter is a device that uses machine vision technology to detect the surface color of peanuts through a visual system to achieve peanut color sorting. Its main function is to separate high-quality peanuts from inferior peanuts based on the difference in peanut color to improve the quality and value of peanuts.

Improve quality: The peanut color sorter can separate high-quality peanuts from inferior peanuts based on the difference in surface color of peanuts, thereby improving the quality and value of peanuts. By removing bad peanuts such as yellow skin and black skin, the uniformity and processing quality of peanuts can be improved to meet market demand. **Efficient sorting:** The peanut color sorter uses high-precision image processing technology and intelligent algorithms to quickly and accurately detect and classify peanuts, improving sorting efficiency and production efficiency. Compared with traditional manual sorting methods, color sorters can significantly reduce labor costs and sorting time, and improve overall production efficiency.
