Pectinase is a light yellow powdery substance, which refers to the enzymes that decompose the main component of plants - pectin. Pectinase is widely distributed in higher plants and microorganisms, mainly through liquid submerged fermentation and purification to produce pectin biological enzyme preparations in colleges and universities. It is generally used to make some beverages such as wine, fruit juice, vegetables and other beverages and plays a significant role in food processing. The principle of action of pectinase is mainly by decomposing pectin and decomposing it into two components: oligogalacturonic acid and galacturonic acid. Pectinase can be used in the brewing of vegetable juice, fruit juice and wine to improve the juice yield.

Novozymes, DuPont (IFF) and DSM are the top 3 companies in global pectinase market and account for about 60% of total market share. Geographically speaking, Europe holds about 40% of global market share, followed by China with about 20% share. In

terms of type, Pectinesterase segment holds a main share of about 30%. In terms of application, food and juice industry segment accounts for over 50% of the global share.
