The global Pedelec Drive Unit market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Pedelec Drive Unit is one of the core components of Pedelec. It is responsible for providing power to enable the electric bicycle to move. Pedelec Drive Unit is usually installed in or near the wheel. It drives the wheel to rotate through electrical energy, allowing the Pedelec to accelerate, climb and maintain speed.

United States will become an important market for Chinese Pedelec companies. Pedelec has only been developed in the United States for a short time, and sports enthusiasts have a high consumer stickiness. In 2021, the US government proposed to provide tax credits, commuting allowances and other subsidy policies to users who purchase Pedelec, which will further catalyze the demand for Pedelec. At the same time, there are currently no core motor drive system suppliers in the United States, and the dependence on imports from China is relatively high.

With the decline in the total population, the rise in aging problems, and the high domestic environmental protection calls, the Pedelec market in Japan can be further expanded.

According to the German Two-Wheeled Vehicle Union (ZIV), Pedelec will account for about 50% of the German bicycle market share.
