Pedestrian Detection Lighting Systems are advanced vehicle safety technologies that integrate pedestrian detection sensors (such as cameras, LiDAR, or radar) with adaptive lighting systems to enhance visibility of pedestrians, particularly in low-light or night-time conditions. When a pedestrian is detected within or near the vehicle's path, the system automatically adjusts or intensifies the vehicle's headlights—such as by widening the light beam, increasing brightness, or focusing illumination directly on the pedestrian—to alert both the driver and the pedestrian, thereby reducing the risk of accidents. These systems are often part of broader advanced driver-assistance systems (ADAS) aimed at improving road safety.

United States market for Pedestrian Detection Lighting Systems is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
