The global PEEK for Semiconductor CMP Retaining Rings market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

PEEK is short for polyether ether ketone. These polymers are notable for their phenylene rings and oxygen bridges, which result in resilience, durability, and strength. Wafer manufacturing is a term used to describe the process of creating chips, otherwise known as integrated circuits, which are used in everyday devices. You will find chips in everything from cars to military jets. PEEK is great for semiconductor applications because of its outstanding combination of physical properties. Longer Lifetime ? CMP (chemical-mechanical positioning) rings made with PEEK can provide less downtime, and more throughput with up to 2x wear resistance compared to other materials. Potential Yield Enhancement ? Low particle generation and higher purity, resulting in lower outgassing and extractives that may lead to yield improvements. Faster Process ? PEEK endures processes with up to 260°C and harsh chemicals, which allows for faster processing and less cooling time.
