PEEK cables are high-performance specialty cables using polyetheretherketone (PEEK) as the insulation or sheath material. PEEK is an engineering plastic with excellent high-temperature and chemical resistance, high mechanical strength, and low-smoke, halogen-free flame retardancy, enabling it to maintain stable electrical performance and physical structure in extreme environments (such as high temperature, high pressure, severe corrosion, or high radiation). These cables are widely used in aerospace, oil and gas, nuclear power, automotive engine compartments, and high-end industrial equipment. They are suitable for signal transmission, power transmission, and data communications, and are particularly well-suited for demanding operating conditions requiring extremely high reliability, safety, and long life.In 2024, the global PEEK cable production reached 4583.6 kilometers, with an average selling price of US$25 per meter,the single-line production capacity is 200 kilometers/year.
