## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The PEEK Cranial Repair System is a medical device used in neurosurgery to repair and reconstruct cranial defects or deformities. Made from polyether ether ketone (PEEK), a high-performance polymer, this system offers several advantages over traditional materials like titanium or autologous bone grafts. PEEK is biocompatible, radiolucent (allowing clear imaging with CT and MRI scans), and has mechanical properties similar to natural bone, making it an ideal material for cranial implants. The system typically includes custom-designed or prefabricated implants that fit precisely into the defect site, providing structural support and protection for the brain. PEEK cranial implants are lightweight, durable, and can be tailored to match the patient's anatomy, enhancing surgical outcomes and patient recovery.

The global PEEK Cranial Repair System market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.

LP Information, Inc. (LPI) ' newest research report, the "PEEK Cranial Repair System Industry Forecast" looks at past sales and reviews total world PEEK Cranial Repair System sales in 2023, providing a comprehensive analysis by region and market sector of projected PEEK Cranial Repair System sales for 2024 through 2030. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global PEEK Cranial Repair System.

As a new type of implant material, PEEK has gradually become favored by doctors and patients in recent years because its use in skull repair and fixation is superior to titanium materials in terms of personalized matching, medical imaging compatibility, physical and mechanical properties, and comfort. However, because PEEK skull repair and fixation products are still in the popularization period and are more expensive than titanium material products, the penetration rate in the field of skull repair is still at a low level.

In the future, with the increase in per capita disposable income, changes in people's medical concepts, and the further promotion of PEEK's excellent performance among doctors and patients, the penetration rate of PEEK skull repair and fixation products is expected to enjoy greater room for improvement.
