As a new type of implant material, PEEK has gradually become favored by doctors and patients in recent years because its use in skull repair and fixation is superior to titanium materials in terms of personalized matching, medical imaging compatibility, physical and mechanical properties, and comfort. However, because PEEK skull repair and fixation products are still in the popularization period and are more expensive than titanium material products, the penetration rate in the field of skull repair is still at a low level.

In the future, with the increase in per capita disposable income, changes in people's medical concepts, and the further promotion of PEEK's excellent performance among doctors and patients, the penetration rate of PEEK skull repair and fixation products is expected to enjoy greater room for improvement.
