PEEK(polyetheretherketone), is a high-performance thermoplastic organic polymer material. Its main molecular chain contains a large number of ether bonds (-O-) and ketone bonds (-C=O). This special structure makes PEEK material achieve a good balance between strength and toughness. PEEK material has the characteristics of high temperature resistance, wear resistance, corrosion resistance, self-lubrication, etc., and its insulation and chemical resistance are better than ordinary metals. The density is about half of that of aluminum alloy, which can achieve lightweight while maintaining high strength and rigidity. PEEK material is widely used in the joints, limbs, torso and limb skeletons of humanoid robots. The lightweight characteristics help reduce the overall weight of humanoid robots, improve the energy efficiency and flexibility of robots, and become a "lightweight" solution for humanoid robots.

United States market for PEEK Material for Humanoid Robots is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
