The global PEEK Materials market size is predicted to grow from US\$ 589 million in 2025 to US\$ 881 million in 2031; it is expected to grow at a CAGR of 7.0% from 2025 to 2031.

Polyether ether ketone (PEEK) is a semi-crystalline high temperature thermoplastic that offers a unique combination of exceptional performance characteristics. PEEK has excellent long term chemical resistance and also offers thermal and mechanical properties. PEEK is used to make some specialized components, which are used in their various applications. PEEK has excellent strength, rigidity and toughness at elevated temperatures, chemically resistant to most common solvents, has low moisture absorption, superior electric properties, with FDA compliant, and relatively low smoke and gas emissions.

The major raw materials for PEEK Materials are 4,4 Difluorobenzophenone, Hydroquinone and Diphenyl sulfone. Fluctuations in the price of the upstream product will impact on the production cost of PEEK Materials.
