Peelable coating mask, also known as a peelable solder mask or peelable mask, is a protective material applied to PCBs during the soldering process. It serves as a temporary layer that covers certain areas of the circuit board, preventing solder or other contaminants from adhering to those areas. The mask is typically applied using a liquid or tape form and can be easily peeled off once the soldering process is complete. Peelable coating masks are commonly used in PCB assembly to protect sensitive components, connectors, or areas that require post-soldering inspections or modifications. They provide a convenient and cost-effective solution for temporary protection during soldering, allowing for easy removal and reducing the need for

subsequent cleaning or rework.
