The global PEG-75 Lanolin market size is predicted to grow from US\$ 55.44 million in 2025 to US\$ 74.92 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

PEG-75 lanolin is a nonionic surfactant produced by reacting natural lanolin with ethylene oxide. It combines the highly effective emollient, moisturizing, and skin-softening properties of lanolin with excellent water solubility, leaving no greasy residue and forming a stable, transparent gel. It is widely used in skincare and haircare products such as lotions, shampoos, and facial cleansers.

The upstream sources are primarily crude lanolin and ethylene oxide from wool processing. Crude lanolin is a natural waxy substance extracted from sheep's wool, a secretion from the sebaceous glands of sheep. Lanolin production is closely related to sheep farming. Crude lanolin requires refining to remove impurities, pesticide residues, and odors, resulting in refined lanolin that meets cosmetic-grade requirements.

Global sales in 2025 were approximately 6,370 tons, with an average selling price of US\$8,896 per ton. The industry's gross profit margin is around 25%-30%.

The global surge in transparent shampoos, micellar makeup removers, and alcohol-free facial cleansers has significantly driven demand for high-performance water-soluble emollients. PEG-75 lanolin effectively counteracts the damage to the skin barrier caused by anionic surfactants (such as SLES), providing a silky smooth feel without tightness after washing. This has become a core selling point for brands to enhance customer loyalty. Furthermore, the integration of a sustainable supply chain?utilizing bio-based ethylene to produce ethylene oxide and combining it with pesticide-free certified natural lanolin?resulted in excellent performance in the 2026 carbon footprint audit, perfectly aligning with the stringent raw material sustainability requirements of

multinational giants such as L'Oréal and Estée Lauder Companies.
