PEG-75 water-soluble lanolin is a nonionic surfactant modified from natural lanolin using ethylene oxide. It not only retains the excellent moisturizing, hydrating, and skin-repairing properties of lanolin but also achieves excellent water solubility, overcoming the shortcomings of traditional lanolin such as greasiness and insolubility in water. It is commonly used in light cosmetics such as lotions, creams, and shampoos.

The upstream sources are mainly crude lanolin and ethylene oxide produced from wool processing. Crude lanolin is a natural waxy substance extracted from sheep's wool, a secretion from the sebaceous glands of sheep. Lanolin production is closely related to sheep farming. Crude lanolin needs to undergo refining to remove impurities, pesticide residues, and odors to obtain refined lanolin that meets cosmetic-grade requirements.

Global sales in 2025 were approximately 6,370 tons, with an average selling price of US\$8,896 per ton. The industry's gross profit margin is around 25%-30%.
