PEG-based surgical sealant is a medical adhesive derived from polyethylene glycol (PEG), used to seal tissues and prevent leaks during and after surgery. This type of sealant is favored for its biocompatibility, flexibility, and strong adhesive properties. It works by forming a hydrogel matrix when applied to the surgical site, which effectively adheres to tissue surfaces, providing a watertight and airtight seal. PEG-based sealants are particularly useful in surgeries involving delicate tissues or organs, such as the lungs, blood vessels, and gastrointestinal tract, where preventing fluid leakage is critical for healing and recovery. Their use helps reduce complications, improve surgical outcomes, and minimize the need for additional interventions.

The global PEG-based Surgical Sealant market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
