The global PEGylated Granulocyte-Colony Stimulating Factor market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

PEGylated Granulocyte-Colony Stimulating Factor (G-CSF) is a long-acting form of G-CSF in which the protein is chemically linked to polyethylene glycol (PEG), a biocompatible molecule that increases its size and stability, reducing renal clearance and extending its half-life in the bloodstream. This PEGylation allows for sustained stimulation of neutrophil production, reducing the frequency of administration needed to manage neutropenia (low neutrophil count) in patients undergoing chemotherapy or with conditions that weaken immune function.
