Abstracts

The global Pelvic Circumferential Compression Devices market size is predicted to grow from US$ 197 million in 2025 to US$ 314 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

In 2024, global pelvic circumferential compression device output reached 2.85 million units versus 3.4 million units of capacity, with average unit price USD 66, and manufacturers achieving an average 41% gross margin. Pelvic Circumferential Compression Devices (PCCDs) are emergency and peri-operative stabilization systems designed to apply controlled, uniform circumferential pressure around the pelvic ring to rapidly reduce pelvic volume, tamponade internal bleeding, and stabilize unstable pelvic fractures before definitive fixation; their supply chain begins upstream with medical-grade textiles, high-strength hook-and-loop fasteners, polymer buckles, mechanical/ratcheting tensioners, inflatable bladders, and pressure-limiting regulators, which are sourced by midstream manufacturers that perform device design, CAD/CAM cutting, stitching, welding, pressure calibration, and biocompatibility testing. Finished PCCDs are then supplied downstream to trauma centers, emergency medical services (EMS), military medical units, operating rooms, and orthopedic departments via distributors, hospital procurement networks, and government tenders.

United States market for Pelvic Circumferential Compression Devices is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Pelvic Circumferential Compression Devices is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
