The global PEM Electrolysis Hydrogen Production Equipment market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

Hydrogen production by PEM electrolysis of water is one of the main technical routes for producing green hydrogen. Polyfluorosulfonic acid membrane is used as proton exchange membrane, and pure water is used as reactant. It has the characteristics of high hydrogen production purity, simple structure and process, and high safety. At the same time, it has a high degree of compatibility with renewable energy such as photovoltaics and wind power, and has a reverse reaction with the downstream proton exchange membrane hydrogen fuel cell, so it has become a hot spot in the industry.

PEM electrolysis hydrogen production equipment uses direct current to electrolyze pure water into hydrogen and oxygen, and obtains high-purity finished hydrogen after passing through gas-liquid separation and purification equipment. It consists of PEM electrolyzer, gas-liquid separation and purification equipment, and public engineering equipment.
