The global Pendent Control Stations market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

Pendant control stations are a series of simple switches that control much larger electrical loads through various means. These loads are typically cranes or hoists, but can also be anything from conveyor belt systems to specialized production line equipment. Pendant control stations usually contain low power pilot duty switches that are connected to relays, Programmable Logic Controllers (PLCs) or other automation circuitry to control the larger equipment loads. In order to use them, the user actuates the switches on manual pendants in a specific order. This causes the machine to move to and from the desired point. In most cases, the more buttons a pendant station has, the more directions the machine is able to move. Most often, pendant control stations are used to control large industrial cranes and hoists. They are also able to be used as the remote control for industrial machines. Pendant control stations are specifically designed for lifting and handling applications, as they enable direct line-of-sight control of motors.

United States market for Pendent Control Stations is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
