The global Penetrating Driver market size is predicted to grow from US$ 873 million in 2025 to US$ 1070 million in 2032; it is expected to grow at a CAGR of 3.0% from 2026 to 2032.

Penetrating drivers are hand screwdrivers with a metal shaft that contacts the screw and penetrates through the grip. It is made so that the metal part behind it that comes out of the grip (called a washer or buttstock) can be struck with a hammer.

The difference between a penetrating driver and a regular screwdriver is that a regular screwdriver has a non-penetrating structure, such that the metal shaft that turns the screw is stuck halfway through the grip. When a regular screwdriver is used and struck with a hammer, not only is the force applied to the screw reduced, but the screwdriver is also damaged.

The primary use of penetrating drivers is to tighten or loosen screws. It is also sometimes used to strike the back of the grip with a hammer to impact and loosen screws that have become tight or corroded and difficult to remove. It is also used to reshape crushed screw heads and for temporary hatcheries.

United States market for Penetrating Driver is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
