According to this study, the global Penetration Seals market size will reach US\$ 914 million by 2031.

Penetration seals are passive fire protection systems designed to maintain the fire resistance of building element or section - wall or floor - where services such as cables, cable trays, pipes or ventilation ducts pass through them.

The vast number of different building materials and different service and the types of penetrations that can be required, leads to a wide variety of different solutions for sealing around these services penetrations. The result is that for most of these penetration sealing applications, several alternative solutions, with different systems and products can be used if the combination has been tested.
