The global People Counting System market size is predicted to grow from US\$ 890 million in 2025 to US\$ 1384 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

People counting system is an electronic device that is used to measure the number of people traversing a certain passage or entrance. Examples include simple manual clickers, infrared beams, thermal imaging systems, WiFi trackers and video counters using advanced machine learning algorithms. They are commonly used by retail establishments to judge the effectiveness of marketing campaigns, building design and layout, and the popularity of particular brands. The industry's gross profit margin is approximately 50-70%.

The major players in the people counting system market include ShopperTrak, RetailNext, Brickstream, DILAX Intelcom GmbH, IRIS-GmbH, Eurotech S.p.A., InfraRed Integrated Systems, Axiomatic Technology, Hikvision and Axis Communication AB, the top 10 players got about 40% market shares.

The main market drivers include the following:

1. Digital transformation and precision marketing demands in the retail industry

Data-driven decision-making: As competition in brick-and-mortar businesses intensifies, retailers need to optimize operational strategies through accurate customer flow data analysis. For example, shopping malls and chain stores deploy people counting systems to monitor customer movement, dwell time, and conversion rates in real time, enabling them to adjust merchandise displays, optimize staffing, and develop

personalized marketing plans.

Technology Empowerment: Deep learning-based AI algorithms (such as YOLO and Faster R-CNN) achieve high-accuracy (over 98%) real-time customer flow counting and trajectory tracking, supporting the generation of statistical reports by department, time period, and other metrics. This contactless management approach avoids disruption to normal operations while providing stores with dynamic monitoring and emergency headcounting capabilities.

Expanding Application Scenarios: Beyond traditional retail, emerging scenarios such as unmanned convenience stores and smart scenic spots are also leveraging customer flow counting systems to optimize resources and provide safety alerts. For example, scenic spots use real-time crowd monitoring to prevent congestion and enhance the visitor experience.

2. Public safety and regulatory mandates

Policy compliance requirements: At the national level, the 14th Five-Year Plan for National Informatization and the Outline for the Construction of Digital China explicitly mandate the improvement of basic population information databases and the promotion of real-time monitoring and intelligent analysis of population data. At the local level, for example, Xinjiang's Regulations on the Protection of Women's Rights and Interests stipulate that the ratio of female to male restrooms in crowded places must be at least 2:1, directly driving the intelligent transformation of public facilities.

Security monitoring needs: In high-density environments like transportation hubs (such as subways and airports) and commercial complexes, people counting systems have become a crucial component of security monitoring. For example, deploying AI-driven dynamic crowd recognition solutions can monitor anomalies in real time and trigger alerts, improving safety management in public spaces.

Data privacy protection: Privacy regulations (such as the Personal Information Protection Law) impose stricter requirements on system design, driving enterprises to adopt privacy-preserving computing technologies such as federated learning to achieve data compliance and secure sharing in sensitive scenarios (such as medical institutions and educational settings).

3. AI Technology Advances and Cost Reductions

Algorithm Optimization: Breakthroughs in computer vision and deep learning algorithms (such as CNN) have significantly improved the recognition accuracy of people counting systems and significantly reduced false alarm rates. The error rate of multimodal perception systems (integrating thermal imaging, millimeter-wave radar, and video analysis) has dropped to below 0.5%, a 40% improvement over traditional technologies.

Hardware Cost Reduction: The computing power density of domestic AI acceleration chips is increasing by 35% annually, and the cost is expected to be 60% lower than imported products by 2028. Edge computing and cloud platforms collaborate to optimize paths, achieving efficient localized processing and further reducing the overall cost of system deployment.

Expanding Application Scenarios: The penetration rate of AI-driven dynamic people recognition solutions in scenarios such as transportation hubs and commercial complexes has significantly increased, and is expected to account for over 70% of the market share by 2030. Furthermore, lightweight deployment and multi-system collaboration have become key technological breakthroughs, driving the industry's evolution from single-function devices to intelligent decision-making support systems.

The market growth of people counting systems is primarily driven by three factors: the digital transformation of the retail industry, the mandatory push of public safety policies, and the advancement and cost reduction of AI technology. In the future, with the deepening of technological integration and scenario innovation, the industry will show a trend of parallel scale growth and intelligent upgrading.
