Abstracts

The global Pepsinogen I (PGI) Assay Kit market size is predicted to grow from US\$ 74.14 million in 2025 to US\$ 104 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

The Pepsinogen I (PGI) Assay Kit is an in vitro diagnostic product designed for the quantitative determination of PGI levels in serum, plasma, or whole blood. Its primary function is to aid in the assessment of mucosal function in the gastric body and fundus, as well as the risk of atrophic gastritis.

The upstream supply chain comprises PGI antigens and antibodies, enzyme-linked or chemiluminescent substrates, magnetic microspheres, colloidal gold, calibrators, quality control materials, buffers, packaging materials, and components for detection instruments. The downstream market consists of hospital clinical laboratories, health examination centers, third-party testing laboratories, and primary care screening institutions.

Globally, the average unit price for PGI assay kits stands at \$265 per kit, with an annual sales volume of approximately 286,000 kits. The industry's annual production capacity ranges from 500,000 to 600,000 kits, and the sector maintains a profit margin of approximately 40%.

The global market is projected to be driven by growing demand for early-stage gastric cancer screening, chronic gastritis management, and routine health check-ups. Consequently, PGI testing is expected to be increasingly utilized in conjunction with other biomarkers such as Pepsinogen II (PGII), Gastrin-17, and Helicobacter pylori antibodies to provide a more comprehensive diagnostic profile. Furthermore, the

market share of chemiluminescence, fluorescence immunoassay, and fully automated detection platforms is expected to rise; product development will trend toward enhanced sensitivity, standardization, rapid turnaround times, and increased accessibility within primary care settings. Additionally, the well-established screening infrastructure in high-incidence regions across Asia is anticipated to drive a sustained increase in clinical testing volumes.
