The global Peptide Antibody Conjugate (PAC) market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

By coupling peptides with specific biological activities with antibodies, peptide-antibody conjugates can give full play to the biological activities of peptides and enhance the therapeutic effect of drugs. This coupling mode enables the drug to play a more effective role after reaching the target site and improve the success rate of treatment. The antibody itself has a long half-life, so the peptide-antibody conjugate usually has a long circulation time, which helps the drug to continue to play its role in the body. At the same time, the peptide-antibody conjugates that have been carefully designed and prepared usually have good stability and can maintain long-term activity in vivo.

United States market for Peptide Antibody Conjugate (PAC) is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
