The global Peptide Synthesis Consumables market size is predicted to grow from US\$ 771 million in 2025 to US\$ 1291 million in 2032; it is expected to grow at a CAGR of 7.7% from 2026 to 2032.

In 2025, the global peptide synthesis consumables sales volume is estimated at approximately 2,628 tons, with an average selling price of around 300.0 US\$/kg and a market size of approximately 788.4 million USD. Peptide synthesis consumables refer to key materials and reagents that are continuously consumed during chemical peptide synthesis. They are mainly used in amino acid coupling, peptide chain elongation, solid support loading, protection and deprotection, resin cleavage, and specialty peptide modification. The product scope mainly covers amino acid building blocks, resins and solid supports, synthesis reagents, and other consumables used in peptide synthesis, with major applications in therapeutic peptide development and manufacturing, drug discovery, life science research, diagnostics, and analytical testing.

The global peptide synthesis consumables market is shifting from a research-driven market to a more manufacturing-driven market. The market was valued at approximately 788.4 million USD in 2025 and is expected to reach 846.7 million USD in 2026, with a projected CAGR of around 7.4% from 2026 to 2032. Demand growth is mainly supported by the expanding development and commercialization of GLP-1 drugs, peptide-drug conjugates, immuno-oncology peptides, antimicrobial peptides, and long-acting modified peptide therapeutics.

In terms of product structure, amino acid building blocks, resins and solid supports, and synthesis reagents represent the core product categories in the peptide synthesis consumables market. Protected amino acids and specialty amino acid building blocks

are benefiting from the rising demand for complex peptides, unnatural amino acids, peptide modifications, and GLP-1-related manufacturing. Resins and solid supports are supported by the broad adoption of SPPS, commercial peptide scale-up, and CDMO capacity expansion. Coupling, deprotection, cleavage, and other synthesis reagents remain high-frequency consumables and provide a stable base for market demand.

From a competitive perspective, European, U.S., and Japanese companies still hold advantages in high-end reagents, specialty resins, quality systems, and global brand recognition. Companies such as Merck, Bachem, Rapp Polymere, Senn Chemicals, TCI, and Watanabe Chemical maintain strong positions in global supply. At the same time, Chinese and Indian manufacturers are gaining ground in protected amino acids, peptide coupling reagents, solid-phase synthesis supports, and specialty intermediates. Companies such as Suzhou Highfine Biotech, GL Biochem, Chengdu Tachem, Tianjin Nankai Hecheng, Sunresin, Sichuan Shifang Sangao, Divi's Laboratories, and ApiSyn are expected to increase their global relevance through cost advantages, capacity expansion, and customized manufacturing capabilities.

Looking ahead, the key growth driver will not only be the number of peptide drug pipelines, but also the increasing need for stable supply, GMP-grade quality systems, impurity control, and batch-to-batch consistency as peptide drugs move from small-scale research to commercial production. Suppliers with scalable manufacturing capability, strong documentation support, and a broad product portfolio are more likely to enter long-term procurement systems of pharmaceutical companies and peptide CDMOs. Compared with pure catalogue suppliers, integrated suppliers covering protected amino acids, resins, coupling reagents, and specialty building blocks are expected to hold stronger competitive positions.
