The report requires updating with new data and is sent in 48 hours after order is placed.

The global Peptide Synthesis market size is predicted to grow from US\$ 684 million in 2025 to US\$ 1024 million in 2031; it is expected to grow at a CAGR of 7.0% from 2025 to 2031.

Peptides are synthesized by coupling the carboxyl of one amino acid to the amino of another amino acid molecule. Due to the possibility of unintended reactions, protecting groups are common necessary. Chemical peptide synthesis most commonly starts at the carboxyl end of the peptide, and thus progress toward the amino-terminus. This is the opposite direction of protein biosynthesis.

Global Peptide Synthesis key players include Bachem, PolyPeptide, USV Peptides, Thermofischer, GL Biochem etc.

Europe is the largest market, with a share over 30%, followed by North America and Asia-Pacific, both have a share over 50% percent.
