The global Percutaneous Endoscopic Gastrostomy Device market size is predicted to grow from US\$ 749 million in 2025 to US\$ 1112 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

A Percutaneous Endoscopic Gastrostomy (PEG) device is a medical tool used to provide long-term enteral nutrition by placing a feeding tube directly into the stomach. The procedure is performed using an endoscope, a flexible tube with a camera, which allows the doctor to guide the insertion of the feeding tube through the abdominal wall into the stomach. PEG devices are typically used for patients who cannot swallow due to neurological conditions, cancers, or prolonged critical illness. This method offers a safer and less invasive way to provide nutrition compared to surgical alternatives.

Fresenius Kabi, Cardinal Health and Nestle are the top 3 companies in global gastrostomy feeding tube (G-tube) market and account for about 40% of total market share. Geographically speaking, Americas holds about 35% of global market share, followed by APAC with about 30% share. In terms of type, low profile G-tube segment holds an important share of over 50%. In terms of application, over 60% of the gastrostomy feeding tube (G-tube) are for adult.
