The global Percutaneous Transluminal Coronary Rotational Atherectomy (PTCRA) market size is predicted to grow from US\$ 83.39 million in 2025 to US\$ 135 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

Percutaneous Transluminal Coronary Rotational Atherectomy (PTCRA) is an interventional procedure used to treat stenotic or calcified lesions in the coronary arteries. PTCRA employs a high-speed rotating burr, typically diamond-coated, that is delivered percutaneously through a catheter into the coronary artery. The rotating burr grinds down the calcified or hardened plaque, restoring normal blood flow. This technique is primarily used in cases where standard coronary interventions, such as balloon angioplasty or stent placement, are ineffective, especially in heavily calcified lesions.
