The report requires updating with new data and is sent in 48 hours after order is placed.

Its main body is plastic film, and the film surface is planned as a ground mask and a ditch mask with a parallel line perpendicular to the film line and a line on the sides. The ditch membrane is divided into clear water film and covering film parallel to the bottom line of the groove bottom. The water film opens a single side to obstruct the capillary suction hole of the soil capillary. This kind of multifunctional irrigation film has many advantages, overcomes the disadvantages of gravity water irrigation, realizes the self-control irrigation of soil capillary pore, multi-faceted, multi-directional and multi position three-dimensional irrigation, has wind resistance, and can realize the field rainwater collection, water storage and water saving; can apply organic fertilizer and chemical fertilizer; can combine rainwater collection, water storage, irrigation, water saving, fertilization and film mulching organically; can be used in flat land, water storage, irrigation, water saving, fertilization and film mulching Slope land, ditch and pit land of various shapes are used
