Perfluoroether rubber (FFKM) is a terpolymer of perfluoro(methylvinyl) ether, tetrafluoroethylene and perfluoroalkene ether, also known as perfluoroelastomer. Compared with fluororubber, it is a rubber that does not contain C-H bonds at all. This rubber has similar thermal stability and chemical resistance to polytetrafluoroethylene. A third vulcanized monomer is added to the FFKM component to form a three-dimensional network structure and make the rubber elastic. The quality of the network structure largely depends on the cross-linking system. In the oil and gas industry, seals are one of the key components. They not only ensure the normal operation of the equipment, but also provide necessary safety and environmental protection. This article provides statistics on the market for perfluoroelastomer polymers used in the oil and gas industry.

Note: The data of companies such as 3M are converted into raw material polymer data based on their finished rubber rings and other seals.

The global Perfluoroelastomer (FFKM) Polymer for Oil and Gas market size is projected to grow from US\$ 316 million in 2024 to US\$ 416 million in 2030; it is expected to grow at a CAGR of 4.7% from 2024 to 2030.
