The global Perfluorohexyloctane Eye Drops market size is predicted to grow from US\$ 528 million in 2025 to US\$ 1601 million in 2032; it is expected to grow at a CAGR of 17.1% from 2026 to 2032.

Perfluorohexyloctane eye drops are water-free and preservative-free ocular surface formulations using perfluorohexyloctane as the core active ingredient. They are mainly used for the treatment and long-term management of evaporative dry eye disease and meibomian gland dysfunction-related dry eye, functioning by forming a stable lipid-layer barrier on the ocular surface and reducing tear evaporation, thereby improving dryness, foreign body sensation, burning, and related ocular surface signs. Current commercial products are mainly based on single-ingredient formulations and 3 mL multi-dose bottle packaging, with representative products marketed in the United States, Europe, Australia, New Zealand, and China. Upstream raw materials mainly include high-purity perfluorohexyloctane, pharmaceutical-grade fluorinated fine chemicals, ophthalmic bottles and dispensing systems, sterile filling materials, and related primary packaging materials. Downstream customers mainly include ophthalmology specialty hospitals, ophthalmology departments of general hospitals, dry eye clinics, retail pharmacies, and patients requiring long-term ocular surface management. The global production capacity of perfluorohexyloctane eye drops in 2025 is estimated at about 4.5 million bottles, with sales of about 2.586 million bottles, an average global price of about USD 208.80 per bottle, and gross margins of about 72%–84%. Overall, the market remains in a commercialization and expansion stage led by the original technology platform and a limited number of regional partners, with a high level of market concentration. The United States contributes the majority of sales revenue, while Europe, Australia and New Zealand, and China provide important supplemental demand and incremental growth.
