The global Perfluorooctane Sulfonate (PFOS) Testing Services market size is predicted to grow from US\$ 1915 million in 2025 to US\$ 2883 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

To address the challenges of insufficient sensitivity, complex pretreatment processes, and difficulty in accurately quantifying trace amounts using traditional detection methods, perfluorooctane sulfonate (PFOS) testing services have emerged. Since the international community included persistent organic pollutants in its control lists and high-resolution mass spectrometry (HPLC) technology has been widely applied, the field of monitoring organic pollutants in the environment and consumer products has developed significantly. Currently, PFOS testing services have evolved into a comprehensive system encompassing various methods, including liquid chromatography-tandem mass spectrometry (LC-MS/MS), high-performance liquid chromatography (HPLC), rapid screening kits, and isotope dilution quantification. These services are widely used in environmental monitoring, industrial product compliance evaluation, textiles and leather, fire-fighting foams, and food contact materials, enabling precise risk identification, ensuring regulatory compliance, and safeguarding ecological and environmental safety.
