The global Perforated Sheet Material market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Perforated sheet materials are used as screens in separators, walkways, sunscreens, ventilation, and decorative coverings. They are constructed by machining or punching holes in a piece of sheet metal or plastic. Perforated sheets are often stronger or more rigid than other mesh products because of their solid sheet structure. Wire mesh is an alternative to metal perforated sheet, but tends to be lightweight, flexible, and not as durable as other perforated and expanded sheet material.
