Heat treatment furnace refers to an electric furnace or a fuel furnace for heat treatment of charge. The commonly used method of conveying in the furnace is to load the workpiece on the heat-resistant steel guide rail and move it with a step-by-step moving beam or push rod. In recent years, heat-resistant steel conveyor belts have gradually been used to transport materials. In this way, the heat treatment operation is more rationalized, which greatly increases the possibility of automation and unmanned management of the heat treatment process.
