Peripheral Scoring Balloon Dilatation Catheter is a specialized medical device used in interventional radiology and cardiology to treat peripheral vascular diseases. It combines the features of a conventional balloon angioplasty catheter with a scoring mechanism. The scoring mechanism consists of small, external elements (such as wires or blades) attached to the balloon, which create controlled micro-incisions or fractures in the arterial plaque when the balloon is inflated. This helps to modify and disrupt the plaque, making it easier to dilate the artery and restore blood flow. The catheter is particularly useful for treating complex lesions, such as heavily calcified, fibrotic, or resistant stenoses, that are less responsive to traditional balloon angioplasty.

The global Peripheral Scoring Balloon Dilatation Catheter market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
