The global Peristaltic Pump High Pressure Syringe market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The most important structural feature of the peristaltic pump high-pressure syringe is that there is no syringe to contain contrast media and physiological saline. The liquid driving method of the peristaltic pump high-pressure syringe is completely different from that of the syringe high-pressure syringe. The peristaltic pump injection method applies driving force outside the pipeline to push the physiological saline or contrast agent in the pipeline to achieve the injection action. The peristaltic pump consists of a drive motor, a pump tube and a pump head. The injection liquid flows in an isolated pump tube. It has the characteristics of quick replacement, controllable operation, and low maintenance costs.
