The global Peristaltic Pump Tubing market size is predicted to grow from US\$ 278 million in 2025 to US\$ 374 million in 2031; it is expected to grow at a CAGR of 5.1% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Peristaltic pump tube is a flexible pipe specially designed for use with peristaltic pumps. It is usually made of high-performance elastic materials such as silicone, polyurethane or fluororubber. Its working principle is based on the peristaltic pump to transport liquid by squeezing and releasing the hose. This non-contact transmission method ensures the purity of the fluid in the closed system and avoids the risk of contamination. Therefore, it is widely used in pharmaceutical, food processing, chemical and laboratory fields. Peristaltic pump tubes not only need to have good flexibility and pressure resistance, but also excellent chemical stability and wear resistance to adapt to various complex working environments.

The development trend of peristaltic pump tubes is mainly reflected in the progress of material science and the expansion of application fields. On the one hand, with the research and development of new materials, future peristaltic pump tubes will be more durable, environmentally friendly and meet strict hygiene standards, such as the development of materials that can withstand higher temperatures and more corrosive chemicals. On the other hand, with the rapid development of biotechnology, pharmaceutical industry and fine chemical industry, the demand for precise flow control is increasing, which has prompted peristaltic pump tubes to develop in the direction of

high precision and low pulsation, and also promoted their application in emerging fields such as genetic engineering and personalized medicine. In addition, in order to improve efficiency and reduce costs, manufacturers are also exploring how to extend the service life of peristaltic pump tubes and optimize their compatibility with pump heads.
