By 2024, global production of peristaltic pumps for aggressive liquids is 466,000 units, with an average selling price of $1,000 per unit.

A peristaltic pump for aggressive liquids is a fluid transport device specifically designed for transporting highly corrosive media such as strong acids, strong bases, and organic solvents. Its core principle is to use rollers or sliders to compress the outer surface of a flexible hose, propelling the liquid through the hose. Since the liquid only contacts the hose and not the pump body, the risk of pump corrosion and cross-contamination is eliminated. These pumps typically utilize hoses made of corrosion-resistant materials (such as PTFE, Viton, and Tygon) and are equipped with chemical-resistant pump heads and housings. They are suitable for applications such as the chemical, environmental, and pharmaceutical industries, where liquid purity and safety are paramount. Their advantages include leak-free operation, easy maintenance, and precise flow rates, making them particularly suitable for transporting hazardous chemicals and high-viscosity liquids.

United States market for Peristaltic Pumps for Aggressive Liquids is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
