The global Peritoneal Hyperthermic Intraperitoneal Chemotherapy Machine market size is projected to grow from US\$ 900 million in 2022 to US\$ 1541.2 million in 2029; it is expected to grow at a CAGR of 8.0% from 2023 to 2029.

The market for hyperthermic intraperitoneal chemotherapy machines is influenced by several factors, including the prevalence of abdominal cancer, advancements in surgical techniques, and overall healthcare infrastructure. The demand for hyperthermic intraperitoneal chemotherapy machines is primarily driven by the need for effective treatment of abdominal cancers and increasing adoption of minimally invasive procedures.

The intraperitoneal hyperthermic perfusion chemotherapy machine combines hyperthermia and chemotherapy, and is a treatment method mainly for malignant tumors in the body cavity. The body cavity hyperthermic perfusion therapy function can effectively solve the problem of cancerous effusion. It has the function of extracting the patient's chest and peritoneal effusion. It uses microwave technology to heat the chemotherapy liquid and maintain a constant temperature. The heated liquid is injected into the human body at a set flow rate. Then return (or draw) to the heating device to form a fully closed circulation treatment system.
