The global Permanent Antistatic Masterbatch market size is predicted to grow from US\$ 845 million in 2025 to US\$ 1441 million in 2031; it is expected to grow at a CAGR of 9.3% from 2025 to 2031.

Permanent Antistatic Masterbatch is an additive masterbatch specially designed to provide long-term, stable antistatic effect. It is usually achieved by adding chemically active antistatic agents to the polymer to chemically react or physically adsorb to maintain lasting antistatic properties. Permanent Antistatic Masterbatch is widely used in products and environments that are very sensitive to static electricity and require long-term protection, ensuring that the product can effectively suppress the generation of static electricity throughout its life cycle.

With the continuous acceleration of the global industrialization process, the problem of static electricity has gradually attracted widespread attention from all walks of life, especially in the electronics, automobile, textile and other industries. The impact of static electricity on product quality, production safety and personnel health cannot be ignored. In order to solve this problem, permanent antistatic masterbatch, as a long-term and stable antistatic solution, is gradually becoming an important part of the market. Permanent antistatic masterbatch is widely used in many fields, including electronic components, antistatic packaging, and automotive interior parts due to its durability, low volatility and non-failure characteristics. In the current market environment, with the growing demand for electrostatic protection in the industry, the market for permanent antistatic masterbatch is developing rapidly and showing some significant trends.

First of all, with the rapid development of the electronics industry, especially the

popularity of consumer electronic products such as smart phones, computers, and home appliances, the production and transportation of electronic components and sensitive parts have higher and higher requirements for antistatic. Static electricity accumulation not only affects the function of electronic components, but also may cause component damage and cause irreversible economic losses. Therefore, the demand for permanent antistatic masterbatch in the electronics industry has been rising year by year. At the same time, the continuous strengthening of environmental protection regulations has prompted companies to find more environmentally friendly and lasting antistatic solutions. Permanent antistatic masterbatch can provide long-term antistatic effect inside the material by adding chemically active antistatic agents, meeting the needs of enterprises for sustainable development.

In the context of global economic integration, the continuous growth of trade has also promoted the increase in global demand for antistatic technology. Especially for sensitive products such as electronic products, auto parts, textiles, etc., antistatic measures have become an indispensable part of production, packaging, storage, transportation and other links. Permanent antistatic masterbatch, as an efficient, environmentally friendly and economical solution, is becoming one of the important products in the global market. With the continuous advancement and innovation of technology, permanent antistatic masterbatch will develop in the direction of more efficiency, environmental protection and durability in the future.

Overall, the market status of permanent antistatic masterbatch is good. With the advancement of technology, the increase in environmental protection needs and the attention of various industries to antistatic, this market will continue to expand in the next few years and has broad prospects. With the advancement of globalization and consumption upgrading, the position of permanent antistatic masterbatch in the global market will become more important and become one of the key factors in improving product quality and production efficiency.
