Permanent Electromagnetic Chucks, combines the advantages of both permanent magnets and electromagnets. An electromagnetic force is required for just a couple of seconds to energize/orient the internal permanent magnets. Once magnetized the product remains ON with permanent magnetic force. Equally, an electromagnetic force (in reverse) is required to turn the product OFF. Unlike electromagnets, the product is FAILSAFE and does not get hotter with time. Unlike permanent magnetic products there are no moving parts and forces can be much greater. They can be used for palletizing, because once energized, the cable can be removed.

United States market for Permanent Electromagnetic Chucks is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
