Permanent Magnet DC Tachogenerators are electrical machines that convert mechanical rotational energy into electrical energy. They are designed to provide an output voltage that is proportional to the rotational speed of the shaft. These generators use a permanent magnet to create a magnetic field, and as the rotor rotates within this field, an electromotive force (EMF) is induced in the stator windings according to Faraday's law of electromagnetic induction. The output voltage of the permanent magnet DC tachogenerator is directly related to the speed of rotation, allowing for accurate measurement of rotational speed in various applications such as motor speed control systems, industrial automation, and robotics.

United States market for Permanent Magnet DC Tachogenerators is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
