A permanent magnet drive is a motor drive that uses a permanent magnet synchronous motor as the driving element. Permanent magnet synchronous motors have built-in permanent magnets that generate a magnetic field without an external power source, allowing for efficient, high-performance operation. The permanent magnet driver achieves precise control of the motor by controlling the rotor position and current of the permanent magnet synchronous motor, thereby achieving precise speed regulation and high-efficiency operation.

The global Permanent Magnet Drive market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
