The global Permanent Magnet Screw Compressor market size is predicted to grow from US$ 3360 million in 2025 to US$ 4534 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

The permanent magnet screw compressor is a high-efficiency and energy-saving air compression equipment. It uses a permanent magnet synchronous motor to drive the screw to rotate and compress the air into high-pressure gas by reducing the volume. Compared with traditional compressors, permanent magnet screw compressors have higher efficiency and lower energy consumption, while maintaining good stability when the rotational speed changes. In addition, its simple structure and few parts make maintenance more convenient.

Permanent magnet screw compressors are widely used in various industrial fields, such as automobiles, electronics, chemicals, etc., especially in factories and production lines that require large amounts of compressed air. They can provide stable and efficient compressed air to meet various process needs. Its efficient compression performance and stable and reliable operation characteristics significantly improve production efficiency.

In general, permanent magnet screw compressors have been widely used and recognized in the industrial field due to their advantages of high efficiency, energy saving, stability, reliability, and easy maintenance. They are one of the indispensable and important equipment in modern industrial production.
