The global Permanent Magnet Synchronous Pitch Motor market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

The permanent magnet synchronous pitch motor, also known as the permanent magnet synchronous generator, is a motor used in wind turbines. It uses permanent magnets as the excitation source to control the wind turbine by controlling the speed and current of the motor. Compared with traditional asynchronous generators, permanent magnet synchronous pitch motors have higher efficiency, lower noise and less maintenance costs. It can also adjust the rotation speed and output power through pitch control to adapt to different wind speeds and load requirements, improving the performance and stability of the wind turbine. Permanent magnet synchronous pitch motors have been widely used in the field of wind power generation and are currently one of the most commonly used wind turbines.
