Permanent Magnetic Material Magnetic Declination Tester is a high-precision instrument specially used to measure the magnetic declination of permanent magnets. Magnetic declination refers to the angle between the actual magnetic moment direction of the permanent magnet after magnetization and the ideal design direction. Its existence will lead to problems such as stray magnetic field, system asymmetry and decreased dynamic performance, which directly affects the reliability of permanent magnets in high-end applications. The instrument obtains spatial magnetic field distribution data through three-dimensional Helmholtz coils or magnetoresistive matrix sensors, and calculates the magnetic declination in combination with mathematical models. It has high precision, high stability and easy operation. It is suitable for measuring the magnetic moment and declination of rare earth permanent magnet materials such as neodymium iron boron and samarium cobalt, as well as traditional permanent magnet materials such as ferrite and aluminum nickel cobalt.
