## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Laser equipment is mainly used for P1, P2, P3 laser scribing and P4 laser edge cleaning in perovskite preparation. 1) Laser scribing: During the preparation process of perovskite modules, the purpose of laser scribing P1, P2, and P3 is to divide the perovskite battery into multiple sub-cells. The metal electrode of the previous battery is different from the metal electrode of the subsequent battery. ITO is connected to form a series battery, thereby increasing the voltage; 2) Laser edge cleaning: There are differences in the various levels of printing or coating during the production of perovskite cells. Use laser etching to clean out an area of 1-10mm on the edge to ensure consistency at all levels.

The global Perovskite Cells Laser Scribing Equipment market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
